◇5 - Push rod connector can be used optionally to join two push rods in the event you don´t find 900mm lengh

◇4 - Use 4 wall lines, use PLA+ material and print it at 220 °C. Ensure that balanced propellers are used. If there is any uncertainty regarding print quality consider using a commercially manufactured propeller hub for safety

◇3 - Center of gravity marking under the wing

◇2 - Print it with TPU 95A. Use 4 walls lines and 0% infill

◇1 - If your motor gets too hot, print this part using ABS or another heat-resistant material
